DETAILED ACTION

Response to Arguments

Applicant's arguments with respect to claims 223-291 have been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 223-226, 234-242, 247-254, 260-261,278-282, 287-291 are rejected under 35 U.S.C. 103(a) as being unpatentable over US Patent 6671273 to Beck in view of US Patent Publication 2004/0215771 to Hayes.

Regarding Claim 223, 238, 251, 278, Beck discloses the assigning a unique user identifier (Host ID) to each authorized user of the computer network see Fig. 2 item 10a, 10b, 10c; upon initiation of a TCP/IP communication attempt initiated by a specific authorized user for access to a specific resource within a computer network, wherein the TCP/IP communications attempt, and inserting the unique user identifier into the header of the packet see Fig. 3 item 46 & Fig. 5 item step 92; extracting the unique user identifier from the header of packet to identify the authorized user and granting/denying the authorized user the access to specific resource as function of unique user identifier see Fig. 5 item 104, 108. But Beck fails to explicitly disclose the intercepting and the

10/644,632 Art Unit: 2132

0012.

packet being a synchronization packet. However, Hayes discloses the intercepting and the packet being a synchronization packet see Fig. 3 & Par. 0029. It would be obvious to one having ordinary skill in the art at the time of the invention to include the intercepting and the packet being a synchronization packet in the invention of Beck in order to perform authorization at the early stages of communication as taught in Hayes see Par.

Regarding Claim 224-225, 239-240, 252-253, 263-264, 266,279-281, Hayes discloses the embedding of identifiers in the sequence number field and acknowledgement field see Fig. 1 item "Identification" & Par. 0043 & Abstract & Par. 0039.

Regarding Claim 226, 241, 254, 265, 267, 282, Hayes discloses the non-zero value of the acknowledgement field see Par. 0039.

Regarding Claim 234-237, 247-250, 260-261, 287-291, Beck discloses the application and the resources being available at a node see Col1 Ln 41-55 & Col 2 Ln 1-5.

Claims 227-229, 242, 255-256, 283-285 are rejected under 35 U.S.C. 103(a) as being unpatentable over US Patent 6671273 to Beck in view of US Patent Publication 2004/0215771 to Hayes and further in view of US Patent 6980658 to Rezailifar et al.(hereinafter Rezalifar).

`Application/Control Number:

10/644,632 Art Unit: 2132

Regarding Claim 227-229, 242, 255-256, 284-285, Beck nor Hayes explicitly discloses the encrypting of username for encoding into packets. However, Rezailifar discloses the encrypting of username and encoding into the packets see Fig. 3 & 5. It would be obvious to one having ordinary skill in the art at the time of the invention to include the encrypting of username and encoding into the packets in the invention of Beck in order to secure the packets on a common network as taught in Rezailifar see Col 8 Ln 34-44.

Claims 230-233, 243-246, 257-259, 286, are rejected under 35 U.S.C. 103(a) as being unpatentable over US Patent 6671273 to Beck in view of US Patent Publication 2004/0215771 to Hayes and further in view of US Patent 6493342 to Breslow et al.(hereinafter Breslow).

Regarding Claim 230-233, 243-246, 257-259, 286, Beck nor Hayes discloses the recording of TCP/IP attempts. However, Breslow discloses the recording of recording of TCP/IP attempts see Fig. 7 item 148 & Fig. 4, 5, 6. It would be obvious to one having ordinary skill in the art at the time of the invention to include the recording of recording of TCP/IP attempts in the invention of Beck in order to store for later use as taught in Breslow see Col 20 Ln 21-39.

`Application/Control Number:

10/644,632 Art Unit: 2132

Claims 262 are rejected under 35 U.S.C. 103(a) as being unpatentable over US Patent 6671273 to Beck in view of US Patent Publication 2004/0215771 to Hayes and further in view of US Patent Publication 2004/0233915 to Lin.

Regarding Claim 262, Beck discloses the assigning a unique user identifier(Host ID) to each authorized user of the computer network see Fig. 2 item 10a, 10b, 10c; upon initiation of a TCP/IP communication attempt initiated by a specific authorized user for access to a specific resource within a computer network, wherein the TCP/IP communications attempt, and inserting the unique user identifier into the header of the packet see Fig. 3 item 46 & Fig. 5 item step 92; extracting the unique user identifier from the header of packet to identify the authorized user and granting/denying the authorized user the access to specific resource as function of unique user identifier see Fig. 5 item 104, 108. But Beck fails to explicitly disclose the intercepting and the packet being a synchronization packet. However, Hayes discloses the intercepting and the packet being a synchronization packet see Fig. 3 & Par. 0029. It would be obvious to one having ordinary skill in the art at the time of the invention to include the intercepting and the packet being a synchronization packet in the invention of Beck in order to perform authorization at the early stages of communication as taught in Hayes see Par. 0012. And further Lin discloses the source identifier being embedded within the header see Fig. 1 item "synchronization source identifier". It would be obvious to one having ordinary skill in the art at the time of the invention to include the source identifier in the

Application/Control Number:

10/644,632 Art Unit: 2132

invention of Beck in order to have an understanding of packet source as taught in Lin see Par. 0005.

Claims 268-273 are rejected under 35 U.S.C. 103(a) as being unpatentable over US Patent 6671273 to Beck in view of US Patent Publication 2004/0215771 to Hayes and further in view of US Patent Publication 2004/0233915 to Lin and further in view of US Patent 6980658 to Rezailifar et al.(hereinafter Rezalifar).

Regarding Claim 268-273, Beck nor Hayes explicitly discloses the encrypting of username for encoding into packets. However, Rezailifar discloses the encrypting of username and encoding into the packets see Fig. 3 & 5. It would be obvious to one having ordinary skill in the art at the time of the invention to include the encrypting of username and encoding into the packets in the invention of Beck in order to secure the packets on a common network as taught in Rezailifar see Col 8 Ln 34-44.

Claims 274-277 are rejected under 35 U.S.C. 103(a) as being unpatentable over US Patent 6671273 to Beck in view of US Patent Publication 2004/0215771 to Hayes further in view of US Patent Publication 2004/0233915 to Lin and further in view of US Patent 6493342 to Breslow et al.(hereinafter Breslow).

Regarding Claim 274-277, Beck nor Hayes discloses the recording of TCP/IP attempts. However, Breslow discloses the recording of recording of TCP/IP attempts see Fig. 7

Application/Control Number:

10/644,632 Art Unit: 2132

item 148 & Fig. 4, 5, 6. It would be obvious to one having ordinary skill in the art at the time of the invention to include the recording of recording of TCP/IP attempts in the invention of Beck in order to store for later use as taught in Breslow see Col 20 Ln 21-39.

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, THIS ACTION IS MADE FINAL. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a). A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Venkat Perungavoor whose telephone number is 571-272-7213. The examiner can normally be reached on 8:30-5:00. If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Gilberto Barron
